

Handover note - purchasing ledger and clearing account

From: Jelka Kovarin, Accountant - To: Dario Petran - Copy: Marek Halvor, Head of Finance

Velograd, 28 July 2025

Dario, as agreed here is what I do every month and what changed on 1 July. My last day is 31 July. Tina Berec stays on accounts payable and knows the daily routine.

What changed on 1 July

New document numbers. Everything created from 1 July has a letter, the year and a running number: P25- for purchase orders, W25- for goods receipts, E25- for vendor invoices and credit notes, J25- for manual journals, Z25- for payments. Old orders keep their 45 number, so a W25 receipt or an E25 invoice against a 45 order is normal. The assignment field also changed: the system now writes order number, a slash and the position; before it was order number and five-digit position in one string.

New clearing account. Group deliveries are posted to 2815 from 1 July, third-party deliveries stay on 2810. I did not move the old balances. An order that was invoiced in June and received in July therefore has one leg on 2810 and the other on 2815; you have to look at both accounts together.

New mapping sheet. Group sent a list of changed group accounts in June. I copied the old sheet and gave the old lines an end date and the new lines a start date of 1 July. The first half-year was reported under the old mapping and was not restated.

Delivery dates. Since July purchasing has to enter the confirmed delivery date in every order line; before that the field was simply empty. When a vendor announces a delay, purchasing overwrites the date. The system keeps only the last value and the date of the last change to the line.

Monthly routine on the clearing account

At month end I run the open items list for 2810 (now also 2815) and go through it line by line. Leftovers where nothing more will come - a few free units, rounding because the vendor bills in pieces and we order in cartons, boxes or rolls - I clear against 5890 with an SA journal. I normally put the order in the assignment field. When several small ones belong together I have sometimes cleared them in one line. We use the limit from the local instruction, NVK 2,500; the group manual says EUR 150. Marek's view is that the local instruction applies until it is rewritten.

Exchange differences go to 6950 since 2024. The instruction still says 6900.

At 30 June I reclassified the group invoices without receipt to 1450 from the open items list and reversed the journal on 1 July. The same is due at year end.

Things you will run into

Group invoices are raised when the goods leave the supply company and are usually here two weeks before the lorry. Sometimes it is the other way round and the invoice comes weeks after the goods.

Several vendors bill in pieces while the order is in cartons, boxes or rolls. The pack sizes are in the material master. Tina enters the quantity and unit as printed on the invoice.

The warehouse corrects receipts by reversing and posting again, sometimes days later. Returns to the vendor are also movement 102. The credit note usually follows within two or three weeks and is deducted in the next payment run.

Laboratory orders are delivered straight to the lab on the second floor. The lab does not always pass the delivery note on to the warehouse, so a receipt can be missing in the system although the goods are in the building. When Tina has a lab invoice without a receipt I call the lab; if they confirm, we release the invoice.

Two vendors only deliver against advance payment (terms ADV). Their invoices are paid first; the receipt follows when the goods arrive.

Prices: purchasing sometimes agrees a new price after the order has gone out and does not always change the order. The invoice is then entered as it is and the difference goes to 5890.

Open points

The local instruction LI-FIN-04 has not been updated for the changes of 1 July. The extraction for the group data warehouse runs on the third working day and takes the purchase documents, the ledger lines of the inventory, clearing, vendor and difference accounts, the mapping sheet and the rate table as they are on that day.
